

IN THE SPECIFICATION:

Replace paragraph on page 3, lines 5-11:

~~Pending Appl. Ser. No. 10/137,852, now allowed, U.S. Pat. No. 6,642,326~~  
uses low levels of hydrosilanes with boraaryl single-site catalyst precursors. It teaches an improvement in activity at low levels and that at higher hydrosilane levels, the polyolefin molecular weight can be undesirably low. In their polymerization examples with low levels of hydrosilanes, there is no indication of increased molecular weight. Where molecular weight is reported, it is lower than the control in three of the four instances.
